

Tips and Tricks

- Try to be an active reader and problem solver to grasp any concept of any subject. By active I mean consistency. Consistency is everything.
- I highly recommend that you first read NCERT appendix for the infinite series. It is nicely explained. Try to solve the examples given in it.
- Try some trigonometric series, try logarithmic and exponential series from NCERT.
- Sequence and series is a topic which really needs practice. You cannot find a pattern everytime. So solve lots of from other reference books and coaching notes that are given below each video.
- Write important formulas for series and try to revise before exams or taking self timed tests.
- One general tip for this chapter: See, first of all you should know that nearly all questions from sequence and series can be solved by putting some values.
